

# MH1200 Quiz 4

October 27, 2016

**Problem 1.** Is it possible to construct a 3-by-3 matrix whose column space contains the vectors  $(1, 1, 1)$  and  $(1, 0, -1)$  but does *not* contain the vector  $(5, 2, -1)$ ? Justify your answer.

$$\begin{array}{rcl} 1 & 1 & 5 \\ 1 & 0 & 2 \end{array} \quad \begin{array}{c} - \\ + \end{array} \quad \begin{array}{rcl} 1 & 1 & 5 \\ 0 & -1 & -3 \\ 0 & -2 & -6 \end{array} \quad \begin{array}{c} - \\ + \end{array} \quad \begin{array}{rcl} 1 & 1 & 5 \\ 0 & -1 & -3 \\ 0 & 0 & 0 \end{array}$$

**Problem 2.** Let  $M_{3,3}$  be the set of all 3-by-3 matrices and  $S = \{A \in M_{3,3} : \det(A) = 0\}$ . Is  $S$  a subspace of  $M_{3,3}$ ? Justify your answer.

03\*3 's determinant is 0
