

Activity 2.1

According to the video, when do engineering students typically have to provide definitions, give descriptions and provide explanations?

Activity 2.2

Summarise the advice Professor Bolton and Associate Professor Butler regarding writing definitions, descriptions and explanations?

1. Giving definitions, providing descriptions and giving clear explanations are important in order not to confuse other people. (e.g. Same abbreviations for different meanings)
2. Writing laboratory reports needs to assume the reader knows nothing about what you are doing. Describing equipment and experiment process precisely is required.
3. In final year project, the information needs to be structural. Methodology that one undertook and terms need to be described and defined clearly.
